How the suite runs through all five dimensions of transformation success

Who checks, independently of the people doing the work, that what was promised is what was delivered, and on what evidence?
One engine underneath, and one thread of evidence running through every dimension.

01 Business value realization

Is the value that was promised being realised?

PRAIS — A costed case, a fit-gap and one modelled chance of landing on budget and on time

ASSURE — Realised value against the baseline, an accountable role per benefit, a savings feed

SUSTAIN — Promised value set against the actuals supplied after go-live

KEYSTONE — Every programme on one board view

02 Operating model simplification

What was removed, not just moved?

PRAIS — Simplification items sorted into keep, change and eliminate. Custom code in use, unused or duplicated

ORCHESTRA PROJECT MANAGEMENT — An exception register: legally required, could configuration meet it, long-term cost

Programme Recovery ADD-ON — Spreadsheets and manual steps routed: standard, configure, extend, automate or retire

03 Data and decision intelligence

Can the data be trusted, and who decided what?

PRAIS — Data readiness read from the client's exports, with cited reference packs behind each reading

ORCHESTRA PROJECT MANAGEMENT — A decision log: the decision, who decided, the rationale and the date

ASSURE — Agent Assurance: what AI agents did, set against what their owner declared

AI AUDIT — Use-case tests of AI decisions, such as the four-fifths bias test, from the client's own counts

04 People and organizational adoption

Are the people ready and available?

PRAIS — Change readiness: sponsor, funded change team, impact analysis, adoption KPIs. SME time and backfill

ORCHESTRA PROJECT MANAGEMENT — A RACI: who is responsible, and who is accountable

Programme Recovery ADD-ON — Role time required, released and backfilled, role by role

05 Governance and evolution

Who checks, independently of the people doing the work?

ORCHESTRA PROJECT MANAGEMENT — Six evidence-linked gates, with each decision recorded

ASSURE — A cutover gate of go, conditional go or no-go, derived from the evidence, with receipts anyone can verify

Separation ADD-ON — A Day-1 readiness gate and transition-service exit evidence, for a unit leaving a group

The engine — Packs carry a read date, with a source watch on the pages they cite. The start is fingerprinted

ALSO IN THE SUITE

- **RESPOND** — The bidder's own tool: every number in a bid traced
- **RT SIGHTGLASS** — A separate product for AI platforms to attach
- **AI AUDIT** — Independent AI Audit, five industries
- **PE Pack** sponsor view ADD-ON

RADIS — One engine under every dimension: it reads the client's own data in the client's own environment, joins it to 204 cited reference packs, applies fixed rules and returns evidence-traced answers.

Point-in-time readings of the client's own exports, read in the client's own boundary.
