ROLTRADER
CONSULTANCY GROUP

FOR SAP ECC CLIENTS PLANNING S/4HANA

Independent evidence at every stage of your S/4HANA migration.

Before you commit, while it runs, at each gate and after go-live: a view that does not depend on the people delivering the work. Every figure comes from your own data and shows the rule behind it.

FOUR PLATFORMS, ONE METHOD

BEFORE YOU COMMIT

PRAIS · decide

- The recommended route and a costed business case, with cost and schedule as a range, not one number
- Custom code by what actually runs
- Fit-gap, integrations, licensing position and readiness

WHILE IT RUNS

Orchestra · run

- Who decided what, why and when, with a review date
- Exceptions and key definitions, each with an owner
- Doubt read from the text people already write, quoted verbatim

AT EACH GATE

Assure · prove

- Cutover and gate conditions checked against your own data
- Reconciliation after load, interfaces, segregation of duties
- Drift after go-live, with its start date

AFTER GO-LIVE

Sustain · drive

- Whether the approved value held, against the original business case
- Who owns each capability once the team has gone
- Support service health seen from your own tickets

INDEPENDENT AI AUDIT — If AI already runs in your estate, or soon will: every AI use case and agent on one register with a named owner, and what each agent did checked against what it was authorised to do.

HOW EVERY PLATFORM WORKS

- **From your own data.** Exports you choose to share. Nothing in SAP is changed and there is no live connection.
- **Deterministic.** The same inputs always give the same result.
- **Honest about gaps.** What was not supplied reads **Not captured**, never zero and never a guess.
- **Point in time.** A reading of the data you supply on the date you supply it.

WHAT STAYS WITH YOU

- **Every decision.** Roltrader never signs off a programme or a gate. You and your delivery partner decide on the evidence.
- **Your consultants and partners.** The evidence is shared with them. It does not replace them.
- **Your data.** Terms for how files are handled are agreed in writing before any file moves.

Independent of whoever introduced it and whoever pays. The method and the output do not change with the payer. Where an input was supplied by a delivery party, the report labels it as not independent. Roltrader does not implement.

Start with the first PRAIS reading

Scope and terms are confirmed in writing before any data is shared. Orchestra, Assure, Sustain and the AI Audit are each optional and scoped separately.

Next step

Speak with your Roltrader partner to agree scope. Have a sponsor and an SAP contact in mind, and the exports checklist follows. roltrader.com

Readings are point in time, computed from the data you supply. Modelled estimates, not a quote or an offer to deliver.
